

WHAT IS CLAIMED:

1. A toy sled comprising:
 - (a) a body having a top surface and a bottom surface, the top surface adapted for receiving a rider thereon and the bottom surface adapted for receiving a wheeled item; and
 - (b) a wheeled item removably secured to the bottom surface of the body, the wheeled item comprising a base piece and a plurality of wheels rotatably connected to the base piece.
2. The toy sled according to claim 1, wherein the wheeled item is a floor scooter.
3. The toy sled according to claim 2 comprising a plurality of wheeled items.
4. The toy sled according to claim 1, wherein the bottom surface comprising an engagement region for receiving the wheeled item.
5. The toy sled according to claim 1 further comprising an attachment mechanism for removably securing the wheeled item to the bottom surface.
6. The toy sled according to claim 5, wherein the attachment mechanism comprises a bolt.
7. The toy sled according to claim 1, wherein the body comprises a polymeric material.
8. The toy sled according to claim 7, wherein the polymeric material is polyethylene.

9. The toy sled according to claim 1, wherein the body further comprises a handle.

10. The toy sled according to claim 1, wherein the body has a first end and an opposite second end, the first end having a connector and the second end having a connector receptor.

11. A toy sled comprising:

- (a) a body having a top surface and a bottom surface, the top surface adapted for receiving a rider thereon;
- (b) the bottom surface having a first scooter engagement region and a second scooter engagement region, the first scooter engagement region adapted to releaseably receive a first scooter and the second scooter engagement region adapted to releaseably receive a second scooter.

12. The toy sled according to claim 11 further comprising an attachment mechanism for removably securing a first scooter to the first scooter engagement region and a second scooter to the second scooter engagement region.

13. The toy sled according to claim 12, wherein the attachment mechanism comprises a bolt.

14. The toy sled according to claim 11, wherein the body comprises a polymeric material.

15. The toy sled according to claim 14, wherein the polymeric material is polyethylene.

16. The toy sled according to claim 11, wherein the body further comprises a handle.

17. The toy sled according to claim 11, wherein the body has a first end and an opposite second end, the first end having a connector and the second end having a connector receptor.
